

SAFETY PRECAUTIONS

Operator protection

Engineering control of operator exposure must be used where reasonably practicable in addition to the following personal protective equipment:

WEAR SUITABLE PROTECTIVE CLOTHING (COVERALLS), SUITABLE PROTECTIVE GLOVES AND FACE PROTECTION (FACESHIELD) when handling the product.

However, engineering controls may replace personal protective equipment if a COSHH assessment shows they provide an equal or higher standard of protection.

AVOID EYE AND SKIN CONTACT.

IN CASE OF CONTACT WITH EYES, RINSE IMMEDIATELY with plenty of water and seek medical advice.

WHEN USING, DO NOT EAT, DRINK OR SMOKE.

WASH HANDS AND EXPOSED SKIN before eating, drinking or smoking, and after work.

Environmental protection:

DO NOT CONTAMINATE WATER with the product or its container. (Do not clean application equipment near surface water / Avoid contamination via drains from farmyards and roads.)

Storage and disposal:

KEEP AWAY FROM FOOD, DRINK AND ANIMAL FEEDINGSTUFFS.

KEEP OUT OF REACH OF CHILDREN.

KEEP IN ORIGINAL CONTAINER, in a cool, dry and well-ventilated place.

WASH OUT CONTAINER THOROUGHLY and dispose of safely.

DO NOT RE-USE CONTAINER for any purpose.

DIRECTIONS FOR USE

IMPORTANT: This information is approved as part of the Product Label. All instructions within this section must be read carefully in order to obtain safe and successful use of this product.

GENERAL INFORMATION

VIVOLT is a wetting agent for use with all approved plant protection products. It reduces the surface tension of these mixtures, and the droplets discharged from the nozzles are smaller and more uniform. The plant protection mixture thus spreads over the entire surface of the leaves forming a persistent and uniform film. VIVOLT therefore increases the adherence and uptake of the plant protection products on foliage.

Hard (or calcareous) water has no negative effect on the wetting and adhesive strength of VIVOLT.

CROPS

VIVOLT can be used on edible and non-edible crops.

RATE OF USE

VIVOLT can be used up to a maximum concentration of 0.2 % v/v of the spray volume.

When applied on non-edible crops, follow the latest time of application specified on the partner pesticide product label.

Always adhere to the most restrictive timing.

When applied to edible crops, a 0.2 % spray solution of VIVOLT may be used in the following situations:

1. When applied with pesticides at half their approved rate (or less). Follow the most restrictive latest application timing on the partner pesticide product label.

Non-printed area on page 2 ONLY (on the back of «Label A-code + Barcode area»)

Non-printed area on page 2 ONLY (on the back of 2D code area printed on the front page)

2. When applied with pesticides at their full approved rate, on the crops detailed below, up to the growth stages specified:

Apple and pear	up to and including fruit 5 - 10 mm
Apricot, cherry, peach and nectarine, plum	up to and including first fruit set
Almond	up to and including first fruit set
Table Grapes and Wine Grapes	up to and including first fruit set
Strawberry	up to and including first fruit development
Raspberry	up to and including first fruit set
Blackcurrant and redcurrant	up to and including first visible green fruitlet
Cucumber	up to and including first fruit set
Tomato	up to and including first fruit set on first truss
Broad bean - Fresh, dwarf French bean, edible podded pea, runner bean	up to and including first pod set
Combining pea and vining pea	up to and including flat pod (non-edible pods only)
Field bean	up to and including first pod set
Oilseed rape	up to and including 10% potential pods
Linseed	up to and including 10% capsules formed
Sugar beet	up to and including 6 fully expanded leaves

Hops	up to and including cone set
Cereals	up to and including GS52 (1/4 inflorescence)
Grain and Forage Maize	up to and including tip of tassel visible
Brussels sprout	up to and including lateral buds begin to develop
Potato	up to and including tuber initiation
Cauliflower	up to and including cauliflower heads begin to form; width of growing tip up to 1 cm ²
Lettuce	varieties forming heads: up to and including heads begin to form
Lettuce	varieties not forming heads: up to and including leaf rosette has reached 30% of the diameter typical for the variety
Carrot, Parsnip, Turnip	up to and including 9 true leaves unfolded
Bulb Onion	up to and including 9 leaves clearly visible
Spinach	leaf rosette has reached 30% of the expected diameter typical for the variety
Broccoli / calabrese	up to and including heads begin to form; width of growing tip > 1 cm ²
Aubergine, Melon, Pepper and Chilli, Winter Squash and Pumpkin	up to and including first fruit set
Red beet	up to and including six fully expanded leaves. Does not include beetroot grown for salad leaf use
Soya bean, Soya bean - Fresh, Soya bean - Dry	end of flowering: first pods visible (approx 5mm length) - BBCH 69-609

MIXING

Half fill the spray tank with clean water and start the agitation. Add the required amount of plant protection product. Follow any manufacturer recommendations regarding correct use of the induction bowl/hopper. Add the remainder of the water followed by the required amount of VIVOLT and continue agitation. Maintain agitation until spraying is completed. Spray solution MUST be used on the day of mixing and must NOT be left overnight.

SPRAYING

VIVOLT should be applied through a hydraulic boom sprayer provided it is in good working order and has been calibrated according to the manufacturers' recommendations. Nozzle choice will depend on any drift management / buffer zone requirements.

Apply VIVOLT as a MEDIUM / COARSE spray as defined by the BCPC system. Boom height should be adjusted to ensure even coverage of the crop, particularly at later growth stages. The correct height is one at which the spray from alternate nozzles meets just above the crop.
